If you haven't checked it out, I highly recommend DaVinci Resolve 16.1. It has many new features, namely RAW, Aperture and their RAW workflow tools, and it's completely Free! One of those new features, which was not available in DaVinci Resolve 15, is the RAW workflow of files that has been shot with a smartphone. It has been discussed in my recent post [HERE](#). There is a tool included in DaVinci Resolve that allows you to directly open your raw images in the DaVinci Resolve editor and not just in any other tool. In addition, you can also edit images (if necessary), grade and export. You can read more about it in the following tutorial. The tutorial is basically the same for any raw shooter, regardless of the camera brand and model used. I am not affiliated with DaVinci Resolve or any other software mentioned in the tutorial. POPULATED FROM DAVINCI RESOLVE DESIGNER 4.4.10. 1.Introduction In my opinion, editing and grading is the most complicated part of post-processing. So it is advisable to start with a simple tool first. This tutorial will cover the most basic functions of DaVinci Resolve 16.1. This includes opening an image, editing the image, color grading and exporting. 2.How to Open a File Open any file in DaVinci Resolve: 1) Select the RAW file from the import folder by clicking on it. OR 2) Select the RAW file in the import folder (if the file has already been imported by Resolve 16, it will appear in the files list) and press the F5 button 3) The files should now be loaded and displayed in the viewer 4) If a thumbnail of the file is missing, click on the small round blue button and then on the file to see the thumbnails. Open a RAW file directly in the editor (must be imported by Resolve before): 1) Open the RAW file in the import folder. It is recommended to change the source setting from ONDEMAND to AUTO (when you import the RAW file), or else it will not be imported. 2) The file will now be imported into the editor and automatically detected by the program. The new RAW workflow in DaVinci Resolve 16.1 82157476af
